

Safety, Health and Environmental Policy

EDF Luminus, producer and supplier of electricity and gas, has a policy in which both caring for the environment as well as a concern for the safety and health of its employees, contractors and neighbours are integrated.

To reduce continuously the environmental impact of our activities and increase continuously overall safety, the management system is permanently developed and continuous improvement is pursued.

To translate our commitment of continuous improvement into reality, annual objectives are set. These objectives are communicated and we check if the achieved results meet the objectives.

The management is committed to put this policy into practice and is ultimately responsible.

The following principles are central and must always be respected:

- All accidents can be avoided.
- Only safe work is good work.
- In case of doubt, safety has always priority.
- Orderliness and cleanliness are an essential part of good and safe working conditions.
- The risks associated with our activities are systematically analyzed and evaluated. The necessary actions are taken to reduce detected risks.
- Incidents must always be reported immediately and investigated. If necessary, actions must be taken to avoid similar incidents.
- Compliance with the legal obligations is a minimum.

- Where possible or necessary, we make maximum use of the current state of the art.
- Procedures and instructions must always be respected. Therefore they must be available, known and understood by everyone.
- It is essential to inform, educate and raise awareness of all concerned.
- Own employees and contractor employees have the same rights and obligations in the domain of health, safety and environment.
- Every employee is responsible for his own safety and the safety of everyone else in his environment.

All employees of EDF Luminus must be committed to comply with these 12 principles while performing their tasks.
