The share of renewable energy in EDF group's installed capacity came to 24%. Solar and wind capacity increased significantly in 2017, with an additional 1.6 GW installed (1). The group undertook an unprecedented acceleration in renewable energy through the launch of its Solar Power Plan to develop 30 GW of solar photovoltaic in France over the period 2020-2035.

---

(1) Including small hydropower plants in France and assets in overseas France.
(2) Capacity corresponding to the share held by the group.
(3) Excluding energy storage and EDF Energies Nouvelles biogas output.
