

World ranking of zero direct CO₂ emissions power producers

[2024, TWh]

■ Dispatchable Zero direct CO₂ emission generation
 ■ Non-dispatchable Zero direct CO₂ emission generation
 ■ Thermal Generation

* For CEIC: distribution between dispatchable and non-dispatchable Zero direct CO₂ emission generation based on 2023 data

Glossary

“CO₂-free emissions”, i.e. leveraging nuclear and renewables technologies, as defined by the IPCC Assessment Report N°5, WG III (mitigation), annex III -Technology-specific Cost and Performance Parameters.

“CO₂-free emissions (Dispatchable)”: nuclear, hydropower, and geothermal (if available) capacities.

“CO₂-free emissions (Non-Dispatchable)”: solar, wind, and other renewable capacities.”
